🔄 Automated trading

ASSET MANAGEMENT

U.S. STOCKS (S&P 500)

 Average annual income
7-11%

 Risk assessment:
Medium

+ Advantages

1. Broad diversification with lower risk.
2. High liquidity.
3. Simple and ideal for beginner investors, no need for expert knowledge or market analysis.
4. Lower fees compared to active portfolio management.

- Disadvantages

1. Uneven asset distribution: Nearly 30% of the entire index is concentrated in just 10 out of 500 companies. This creates a dependency of the index's performance on these major companies.
2. Requires patience: To achieve optimal results, it's best to invest for a period of at least 7-10 years.
3. During economic crises, index values typically decline along with the economy, and it may take a long time to return to their original levels.

GOLD

 Average annual income
6-8%

 Risk assessment:
Low

+ Advantages

1. Easy to purchase: Individuals can buy gold bars from licensed institutions.
2. Reliability: Unlike paper money, which can lose value, or goods that can deteriorate, gold, when properly stored, is not affected by the passage of time.
3. A gold bar is a tangible asset with full property rights. It can be used as collateral, inherited, bequeathed, or gifted.

- Disadvantages

1. Purchasing physical precious metals is subject to VAT.
2. If you choose to store gold bars outside of a bank, be aware of additional costs for authenticity verification. Any damage, such as dents, scratches, or other imperfections, can reduce the asset's value.
3. Low profitability and no passive income: Buying gold bars is more about preserving wealth than generating significant returns.

ASSET MANAGEMENT

REAL ESTATE

 Average annual income
8-12%

 Risk assessment:
Low

+ Advantages

1. Liquidity of the asset.
2. Potential for long-term passive income.
3. Simplicity in transaction processing.
4. Wide range of options, including residential and commercial properties.
5. Minimal risks: Even during a crisis, real estate can be sold or rented out. Profit options include short-term or long-term rentals, resale, or dividing the property into smaller segments.

- Disadvantages

1. High entry barrier and long payback period.
2. Vulnerability to force majeure events (fire, natural disasters, war).
3. Demand and prices are highly dependent on regional conditions, particularly influenced by epidemiological, economic, and geopolitical factors.
4. Additional costs for maintenance, including repairs, taxes, and utilities.
5. The smaller the city, the lower the demand for real estate.

CRYPTOCURRENCIES (BITCOIN)

 Average annual income
60-400%

 Risk assessment:
High

+ Advantages

1. Decentralization: The network is distributed among millions of users.
2. No payment restrictions.
3. Low transaction fees.
4. Scarce and deflationary asset: Limited supply and high demand contribute to significant value appreciation.
5. Low entry barrier for investments.
6. When used correctly, Bitcoin can function as an anonymous currency, free from government oversight.

- Disadvantages

1. Attempts by governments to ban mining and the use of cryptocurrency.
2. High volatility: Bitcoin's value can rise or fall sharply.
3. Limited adoption: Not many users are fully aware of Bitcoin and its key functionalities.
4. Irreversible transactions: Once money leaves your wallet, it cannot be recovered.
5. High risk of losing all assets if not handled properly.

MANUAL TRADING

 Average annual income
50-100%

 Risk assessment:
Very High

Advantages

1. Full control over the situation and the potential for unlimited income in a short period.
2. Ability to react to news and promptly adjust trades.
3. Active use of fundamental analysis.
4. Accurate assessment of market trends.
5. No location restrictions; work can be done from anywhere in the world, even from a beach, as long as there's a laptop and internet access.

Disadvantages

1. 90% of traders incur losses.
2. The human factor: emotions can take over, and self-discipline is often lacking.
3. Constant nervousness and irritability—traders need to maintain maximum composure, rationality, and caution.
4. Lack of 24/7 monitoring of open trades.
5. Failure to adhere to a trading strategy and exceeding acceptable risk levels.

AUTOMATED TRADING

 Average annual income
70-150%

 Risk assessment:
Medium-High

Advantages

1. Full automation and elimination of the "human factor."
2. Speed of executing trades.
3. 24/7 trading and market monitoring.
4. Flexibility and the ability to maintain control.
5. Trading systems provide detailed statistics and analytics on trades, helping traders gain deeper insights into their performance.

Disadvantages

1. Extremely high costs for development and maintenance.
2. Continuous support and software updates are required.
3. To enable 24/7 trading, the trading terminal must be run on a dedicated server, which may not be affordable for everyone.
4. Trading systems do not respond to force majeure events such as political developments, economic changes, and other unpredictable events.
5. Regular monitoring and oversight of the trading system's performance are necessary.

OVERVIEW OF

CRYPTO MARKET

Cryptocurrencies have gained widespread adoption relatively recently, starting in 2008.

Compared to traditional finance, the key distinction of this market lies in its extreme volatility and lower levels of regulation.

Regulatory restrictions on financial markets (Forex, Nasdaq, NYSE) may give retail traders a false sense of transparency and fairness in their transactions.

However, access for retail participant is often limited by institutional players who have direct access to market data and costly solutions.

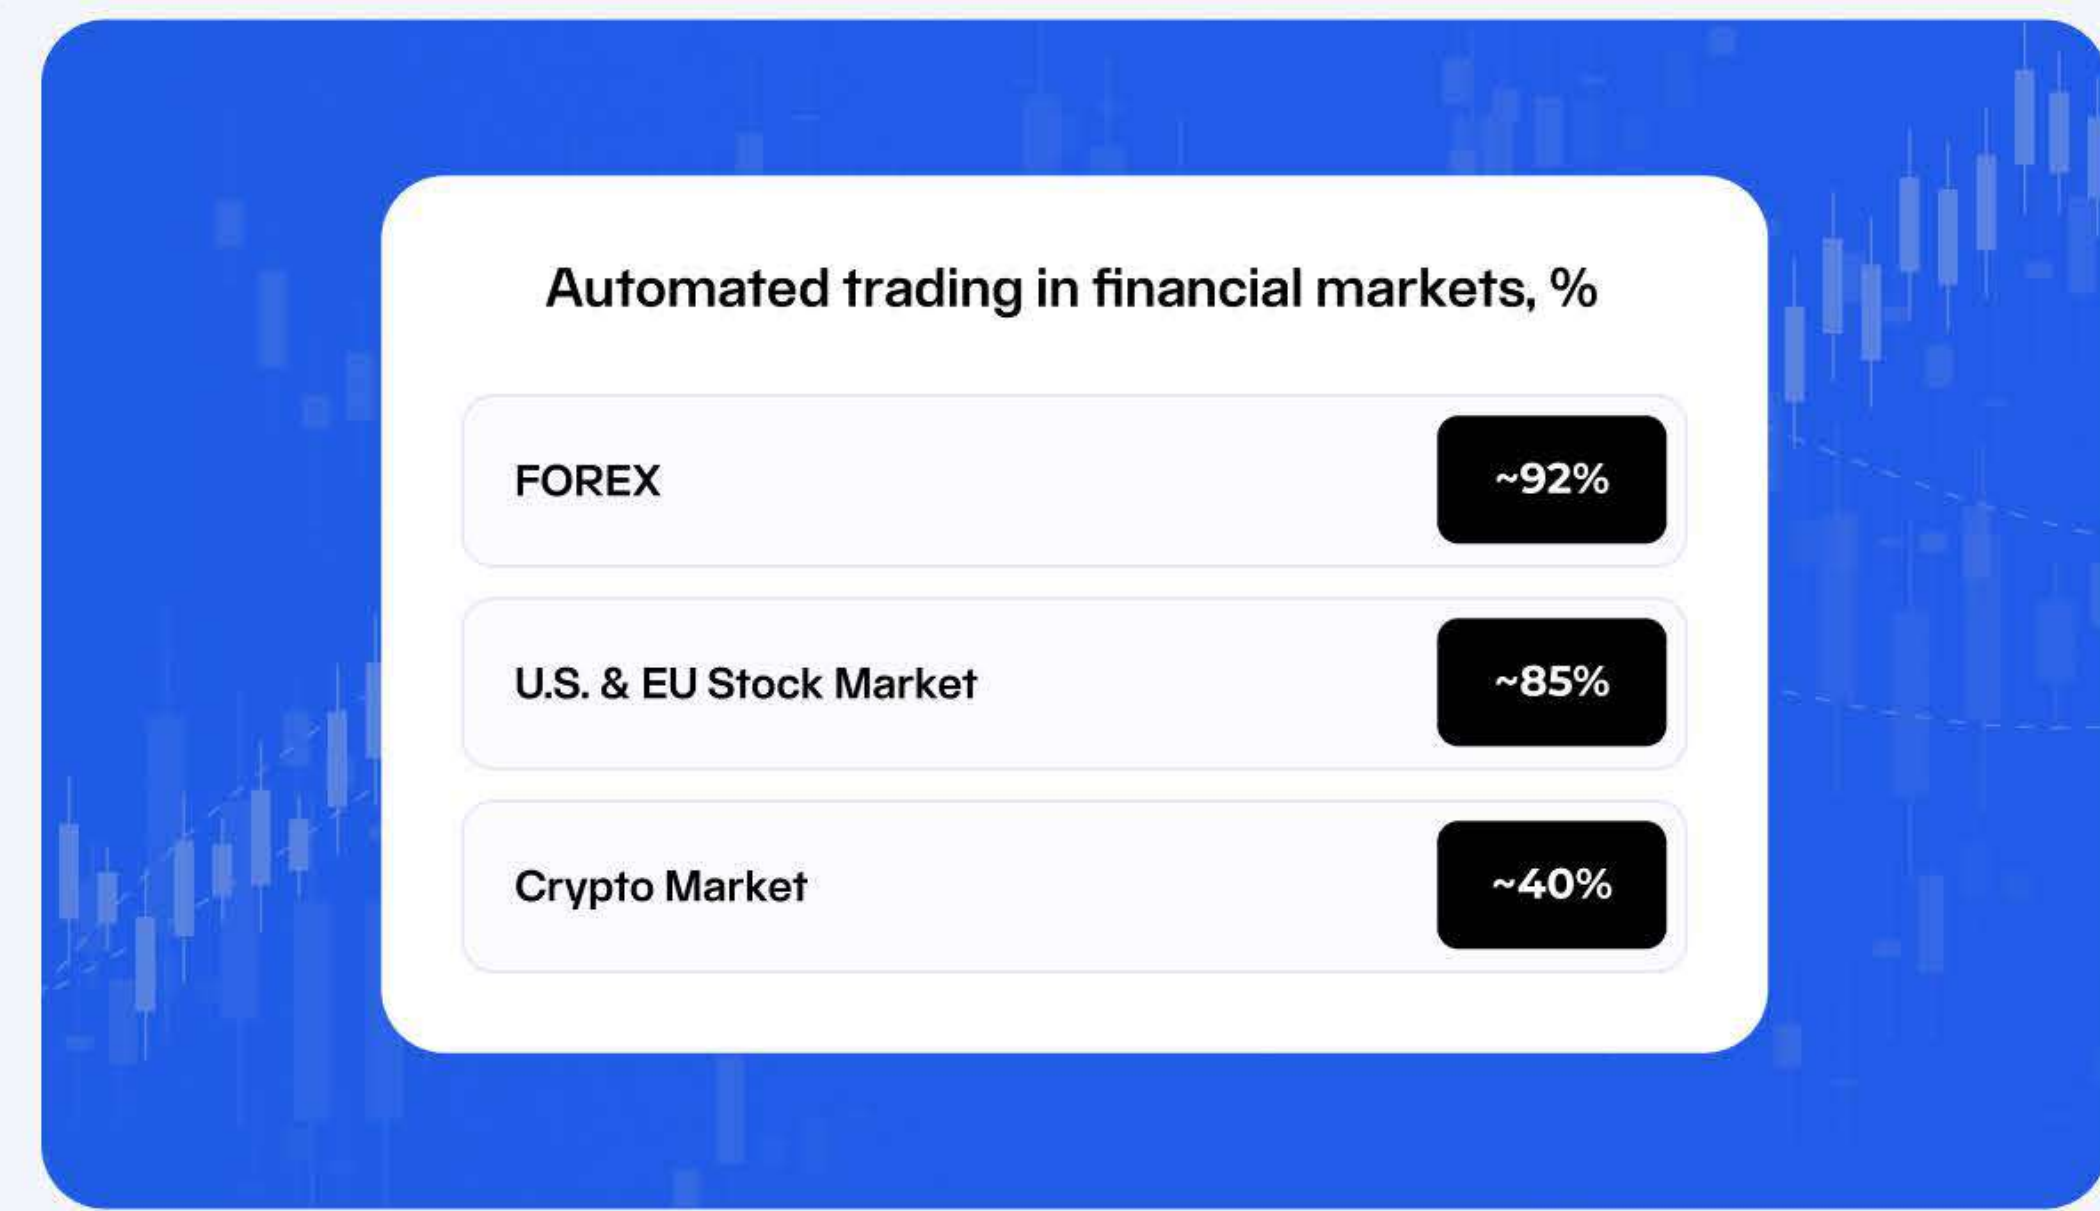

To gain a competitive edge, these companies employ advanced mathematical algorithms capable of executing over 1,000 trades per second.

In reality, only six companies generate over 80% of the profits from automated trading.

 CITADEL | Securities

 TWO SIGMA  GTS  HRT

 imc  [XTX]
VENTURES

 High volatility is one of the factors that keeps the cryptocurrency market more accessible to retail investors. While the majority of trades in forex (92%) and stock markets (85%) are conducted by institutional automated trading systems, this share in the cryptocurrency market is only 40%.

OF A MARKET CYCLE

EVALUATION CRITERIA

FIAT

CRYPTO

✓ PROTECTION AGAINST COUNTERFEITING

The first attempts at counterfeiting began as soon as payment methods were introduced, and today there are advanced techniques that can produce nearly indistinguishable fakes. Counterfeiters exploit the fact that official information about the issuance of currency is confidential, making it impossible to detect counterfeit bills at the moment of printing.

The digital blockchain mechanism ensures that additional issuance of cryptocurrency is not done covertly. The transparency of the blockchain network allows for constant monitoring of token data (price, number of tokens in circulation, total supply) to detect any additional issuance of tokens and prevent them from entering the overall supply.

📄 ACCESS TO ACCOUNT AND TRANSACTIONS

Limited and subject to potential regulatory blocking

Ubiquitous: Only an internet connection is required.

% FEES AND CHARGES

High fees for cross-border and interbank payments

Approximately 0%: Fees are only required to maintain the network.

📊 MARKET OUTLOOK

Decreasing market share due to the growing popularity of cryptocurrencies, leading to higher service costs as a result. The traditional fiat banking infrastructure is already showing its inefficiency, with extremely high maintenance costs (branches, ATMs, cash handling, employee salaries). Consequently, we see rising prices for banking services alongside a decline in service quality.

The adoption of cryptocurrencies is growing every year. In 2022, over 70% of the adult population in the EU was aware of what cryptocurrency is, and approximately 39% had used cryptocurrency at least once for transactions or investment. Additionally, the regulatory environment surrounding cryptocurrencies is increasingly supportive of their legal development: more countries are working on developing their own versions of cryptocurrency—(CBDCs).

🕒 INDEPENDENCE FROM THIRD PARTIES

Complete dependency on regulators and banks

All information recorded on the blockchain remains accessible and transparent to all users, with no possibility for deletion or editing by any single participant.

🚀 SPEED AND TECHNOLOGY

Outdated technologies and protocols: Cross-border payments take 2-3 business days to process.

Modern distributed architecture with high throughput (cross-border payments are processed within seconds).

IN THE CRYPTO SPACE

LONG-TERM ASSET MANAGEMENT

Buying any crypto asset for the long term with the goal of growing capital

Risk Factor
Low Medium

Advantages

1. Preserving peace of mind: No need to constantly monitor prices; patience is key.
2. No need to be an expert in trading to earn returns—focus on analyzing and purchasing solid assets.
3. No transaction fees for buying or selling, as you hold the asset.
4. Holders may receive additional coins through hard forks.

Disadvantages

1. There is a risk of losing invested funds if the coins become worthless or disappear.
2. The coin may not appreciate in value if the development team does not prioritize this goal, posing a risk of falling victim to fraudulent projects.
3. Holders may miss out on profitable opportunities to sell coins and lock in gains due to a lack of market monitoring.

MINING

Using specialized devices for mining cryptocurrency assets

Risk Factor
Medium

Advantages

1. You can earn cryptocurrency as a reward for processing transactions.
2. Decentralization: Miners maintain the network's functionality without the need for central management.
3. Investment in specialized equipment that can also be used for other computing tasks.

Disadvantages

1. Mining requires significant investments in equipment, electricity, and cooling, which can reduce profitability.
2. Competition: As the number of miners increases, the difficulty of mining coins also rises.
3. Technical complexities in setting up and maintaining equipment.
4. Complex profit forecasting: Earnings are highly dependent on market conditions.

OPPORTUNITIES

IN THE CRYPTO SPACE

PARTICIPATION IN PRE-SALE, IDO

Buying new tokens during early-stage sales in private offerings

 Risk Factor
High

Advantages

1. Opportunity to acquire cryptocurrency at earlier stages before it becomes available on public exchanges.
2. Potential for high returns.
3. Participation in project development: Investors often have the chance to provide feedback and suggestions to the team.

Disadvantages

1. Investing in early stages involves high risks as the project has not yet proven its viability and success.
2. The project may provide limited information about itself, making risk assessment more complex.
3. Early-stage investors may encounter fraud or unreliable projects.

AIRDROP, RETRODROP, AND TESTNET

Receiving new tokens for free as a reward for activities

 Risk Factor
Low

Advantages

1. A good way to start your journey in the world of cryptocurrencies without investments and financial risks.
2. Opportunity to receive free tokens, which may later bring relatively high profits.
3. Drop hunters spread information about the product — inexpensive advertising.

Disadvantages

1. Typically, the amount of tokens in a drop is small, and the potential profit may be insignificant.
2. There are fraudulent projects aimed at gaining access to your personal data.
3. There is a high chance of spending time and money (for advanced hunters) without earning anything.

IN THE CRYPTO SPACE

CRYPTOCURRENCY ARBITRAGE

A series of trades aimed at profiting from price differences of identical assets at the same time across different exchanges.

 Risk Factor
Medium

Advantages

1. Instant Profit Opportunity: Aim to capture the spread between buying and selling without the need for forecasting.
2. Minimal Risk: Profit margins are calculated before executing the trade.
3. Simplicity: Buying and selling cryptocurrency on different platforms manually can be done with minimal knowledge of the process.

Disadvantages

1. Need for large initial capital: Price differences between platforms are very small, so significant capital is required. Additionally, fees can reduce profits.
2. Arbitrage trading restrictions: Many platforms prohibit arbitrage trading, which can lead to account suspension and total loss of funds.
3. Low asset liquidity: You may be able to buy an asset at a low price but face difficulties selling it.

CRYPTOCURRENCY TRADING

Classic asset trading, which can be conducted either manually by a trader or automatically through algorithms.

 Risk Factor
High

Advantages

- High volatility and the ability to trade 24/7.
- Full control over the trading process.
- Ability to work from anywhere in the world.
- Unlimited earning potential.
- Personal growth: The longer you stay in trading, the more resilient your psychological state becomes.

Disadvantages

- Difficulty: Not everyone can learn to trade—statistics show that only 1-5% of traders make a profit.
- Risks: Failing to follow risk and money management rules can lead to guaranteed losses of your deposit.
- Time Commitment: Traders must constantly be in front of a computer, searching for profitable trades, monitoring signals, analyzing charts, and so on.

United by the vision of creating a reliable and autonomous financial ecosystem, we aim to transform current trading trends by providing retail participants with access to advanced institutional-level trading tools for risk assessment, financial analysis, and automated trading.

Our goal is to advance the field of automated trading and foster an innovative environment where all participants can thrive through collaboration. We build partnerships with clients based on mutual trust and respect, and we are committed to helping them achieve financial success.

8 DATA ANALYSTS

- Development of machine learning algorithms for analyzing and processing historical trading data from global markets.
- Creation of the core AI model for the AI-Trader EX algorithm.

12 YEARS OF EXPERIENCE

A team of developers and analysts with years of experience, applying practical knowledge in the development of products for the created ecosystem.

10 SOFTWARE DEVELOPERS

- Development and maintenance of the platform.
- Integration of algorithms and trading strategies into the company's products.
- Identification and correction of vulnerabilities.

7 FINANCIAL ANALYSTS

- Creation and manual testing of new trading strategies.
- Development of methodologies for news analysis.
- Planning long-term positions and scaling the company.

JAN KRÖGER

CEO&Founder

Jan Kröger, the driving force behind Aurum, brings a wealth of experience from his background in algorithmic trading and portfolio management. With deep expertise in market behavior and risk management, Jan has built his career on strategic investments and leveraging advanced technologies

like AI to optimize decision-making in volatile markets.

Under his leadership, Aurum combines financial expertise with advanced technology, creating a secure ecosystem. Jan's vision drives Aurum's growth and leadership in the crypto space.

AHMAD ZEN

Marketing Director

Ahmad Zen, Marketing Director at Aurum, has over 15 years of experience in network marketing and cryptocurrency. Known for his strategic acumen, Ahmad has driven impactful marketing campaigns across fintech and blockchain sectors, significantly boosting brand visibility and customer acquisition.

At Aurum, he leverages his deep knowledge of digital marketing and emerging trends to develop innovative strategies that foster growth and engagement.

RICHARD DELGADO MELIAN

Director of Growth

With over 12 years of experience in the finance and tech industries, Richard Delgado Melian has built a reputation for driving business growth and scaling companies to new heights. Over the years, he has successfully led various high-impact growth initiatives across fintech and blockchain sectors, leveraging his deep understanding of market trends and customer needs.

Richard's leadership plays a critical role in positioning Aurum as a leading player in the crypto-asset management ecosystem.

AL RIZQI

Director of Product Development

With more than 6 years of expertise in business development and project management, Al Rizqi is known for crafting innovative, forward-thinking solutions, particularly within the fintech landscape. At Aurum, he plays a pivotal role in shaping the product strategy, ensuring that each solution not only delivers high performance but also meets the evolving needs of users, driving the company's growth and innovation.

DR BRYAN

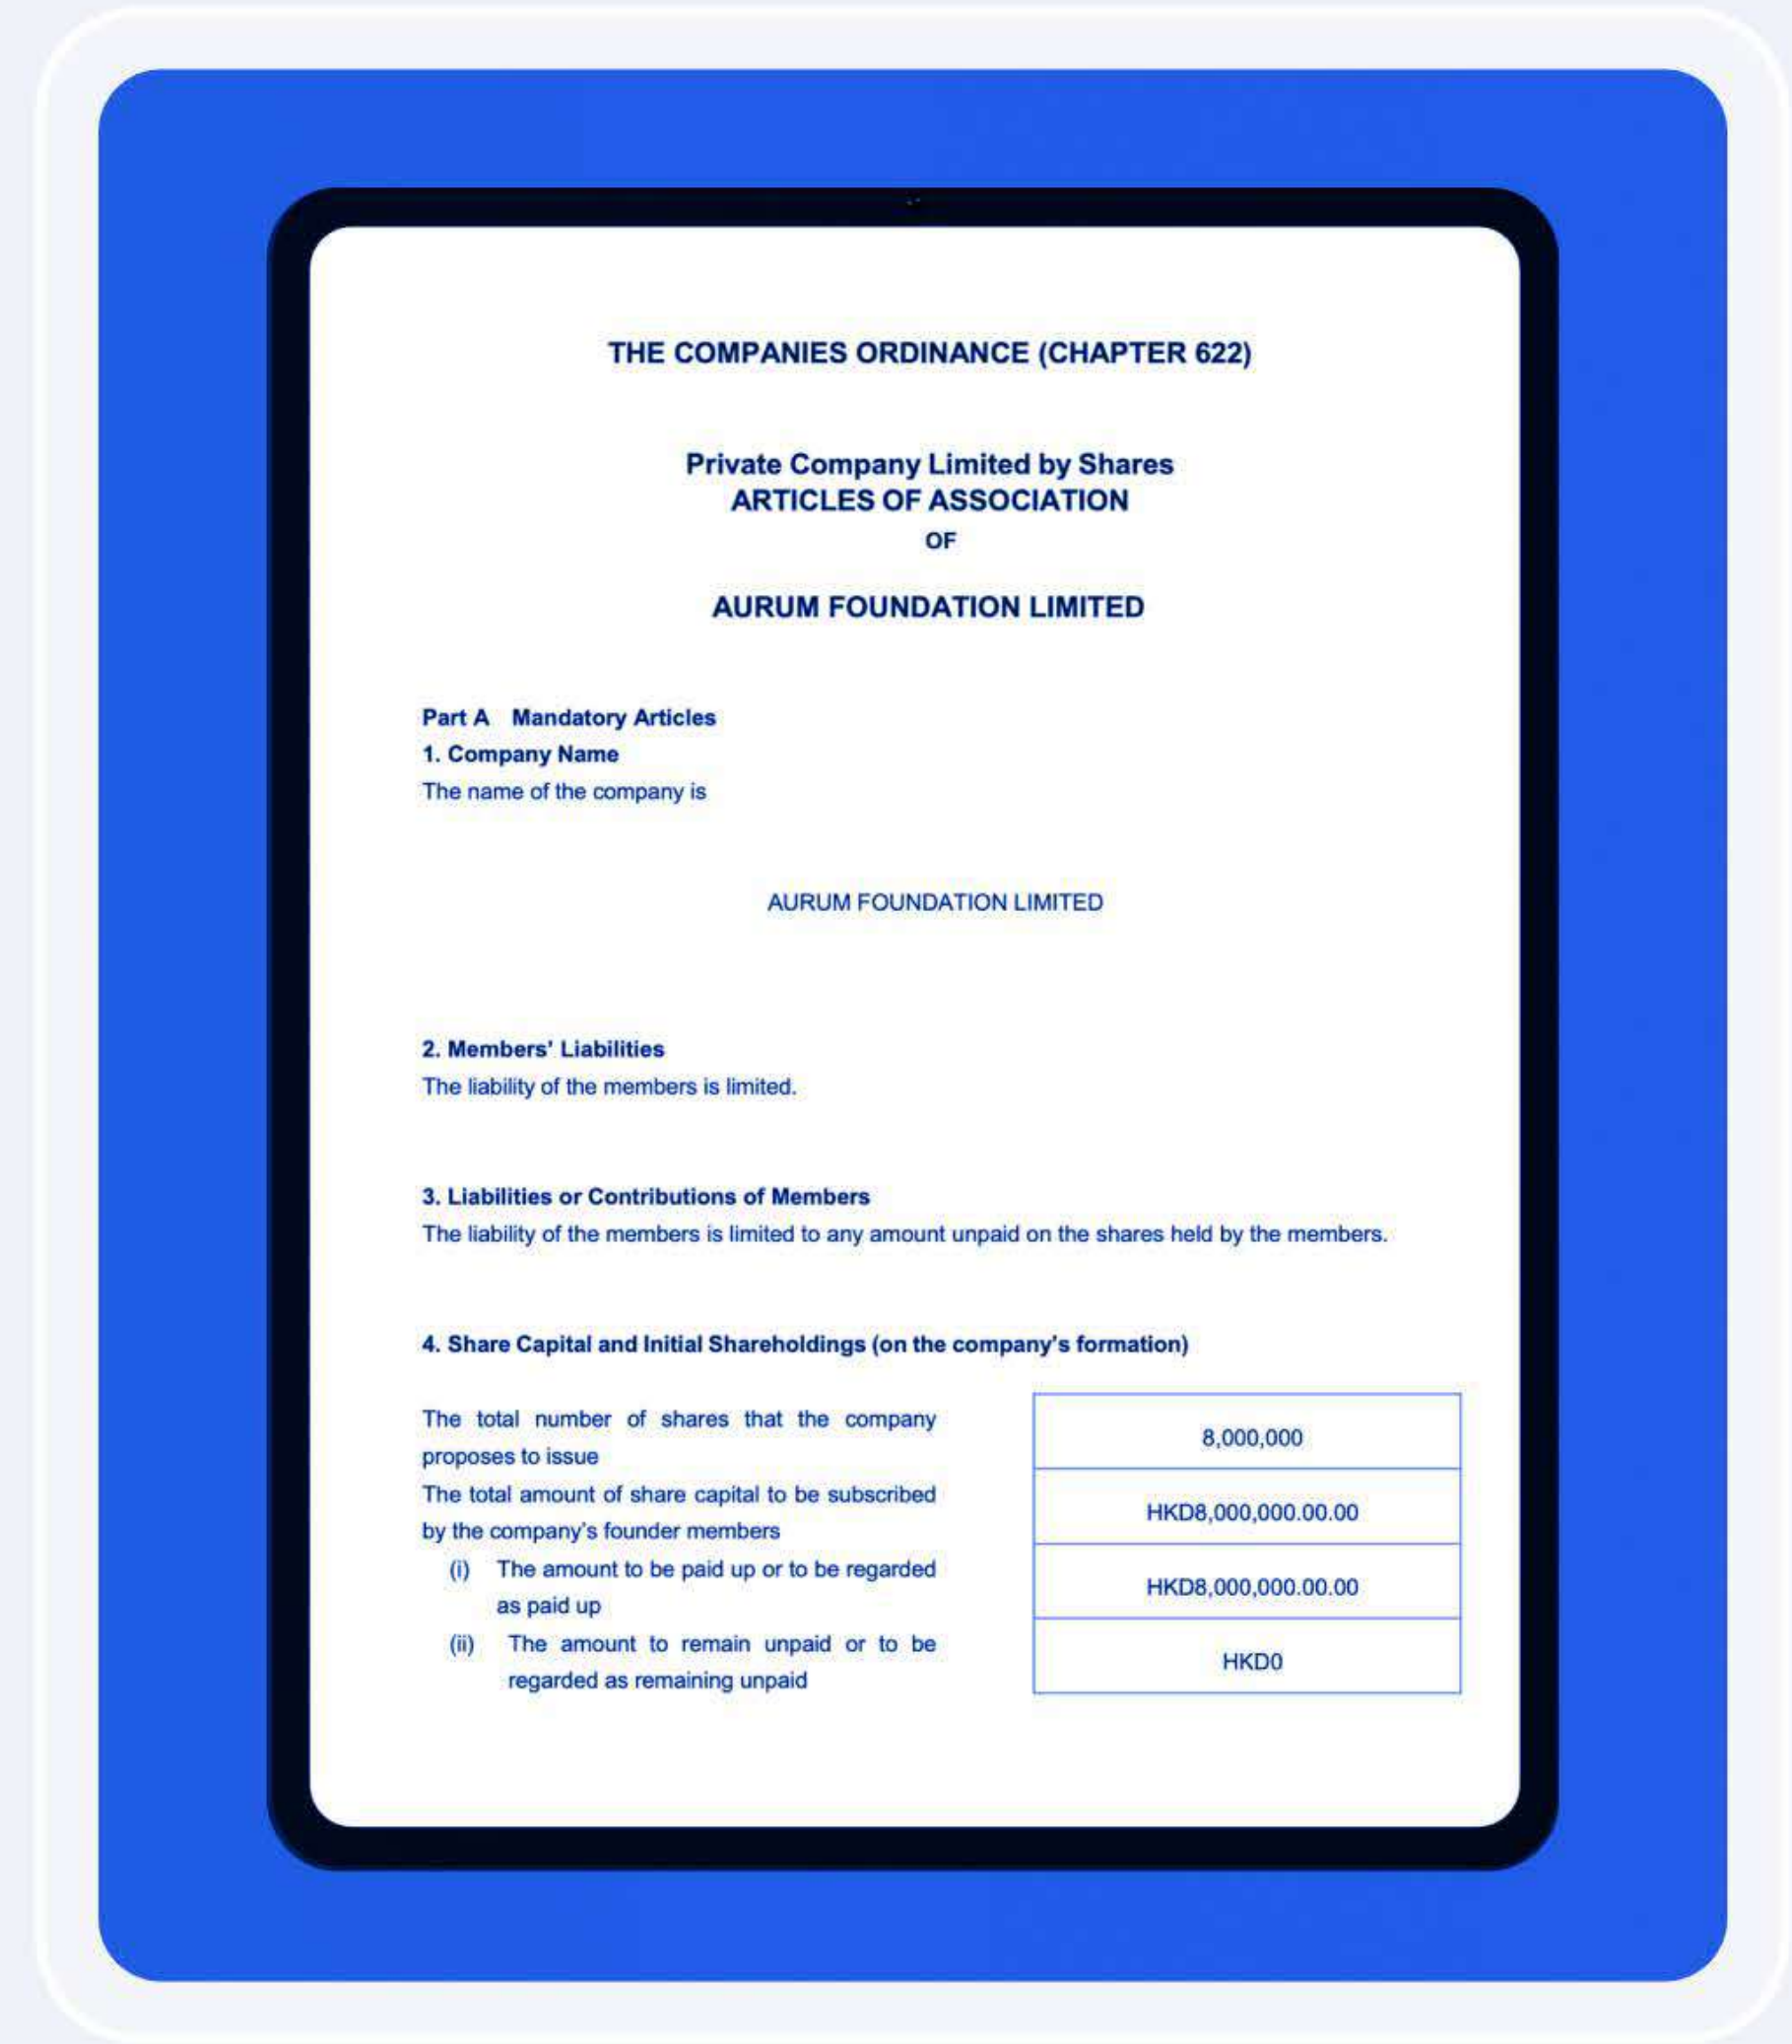

Chief Blockchain Officer

With over 25 years of experience in the blockchain industry and online marketing, Dr Bryan is a certified expert in blockchain, finance, and digital marketing. As the Principal of Chain Network Academy, he has trained countless professionals and entrepreneurs. At Aurum, he leads the development and implementation of blockchain solutions, ensuring seamless integration and innovation across the ecosystem.

Aurum is Registered in Hong Kong

Aurum has officially established its presence in Hong Kong, registered with an authorized capital of \$1 million! This strategic step reinforces our foundation in one of the world’s leading financial hubs.

Through the Aurum ecosystem, we provide individuals with the opportunity to earn income in the cryptocurrency market.

Any user can easily and intuitively generate profits using our tools without requiring specialized training or mentors.

BY OFFERING THESE OPPORTUNITIES, WE PURSUE OUR OVERARCHING GOALS:

The growth of the internal community within the ecosystem will enable us to attract valuable partnerships and expand our products into new geographical markets.

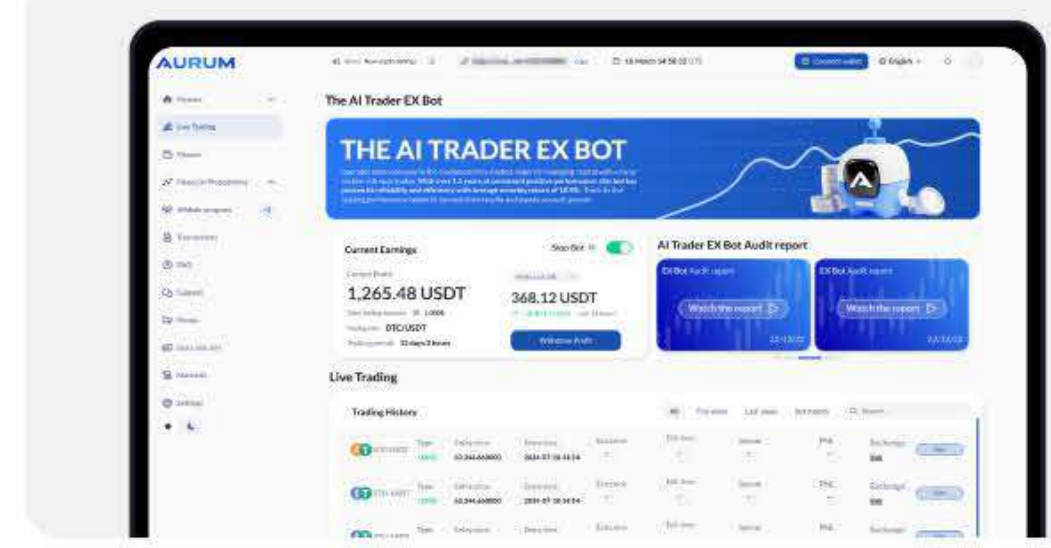

Increasing trading capital will enable us to generate greater profits from the company's developments and allocate part of the funds towards creating new innovations.

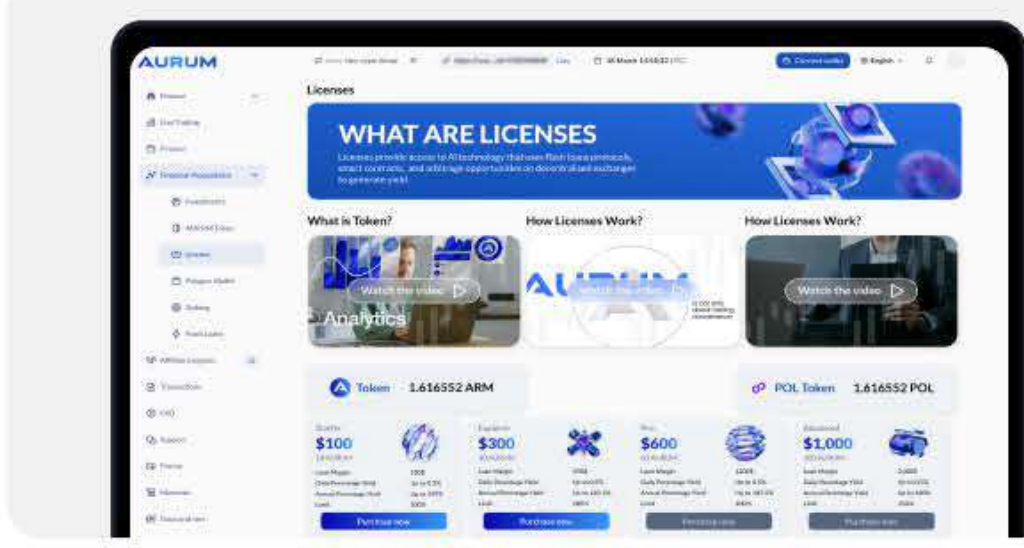

Creating a community of like-minded individuals and visionaries who will not only use the ecosystem's products but also actively contribute their insights to Aurum's solutions, thereby helping to advance the development of the environment.

FINANCIAL ECOSYSTEM OF THE COMPANY

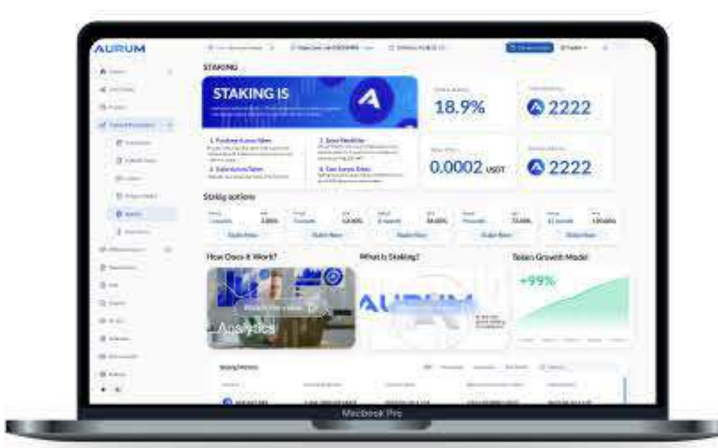

/01 Aurum AI-Trader EX Bot

An AI-powered trading system that optimizes profits by identifying medium-term opportunities through machine learning.

/02 Aurum NFT Licenses

Exclusive licenses that provide access to high-yield trading and arbitrage opportunities within the Aurum platform.

/03 Aurum Staking

A staking feature allowing users to earn daily rewards while securing the network for both short- and long-term gains.

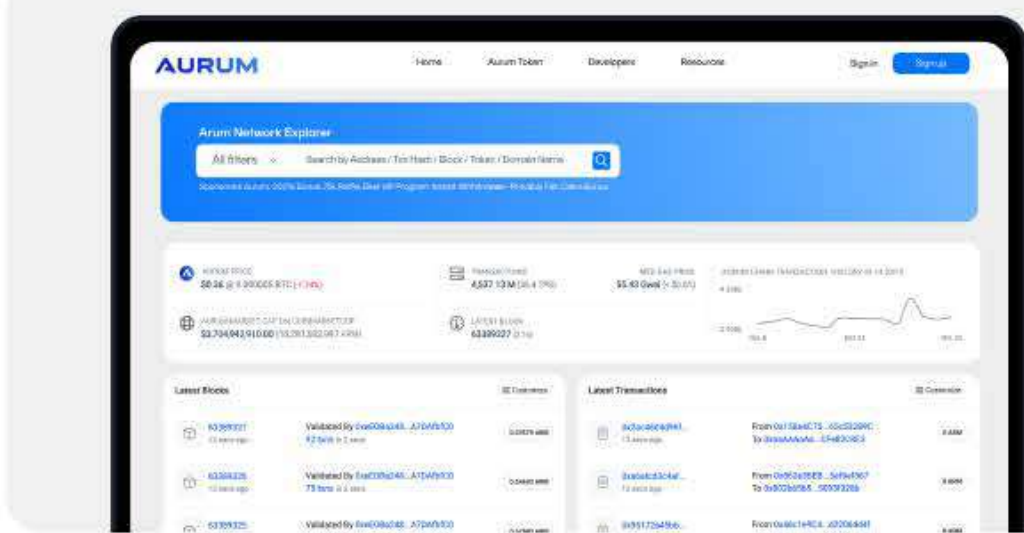

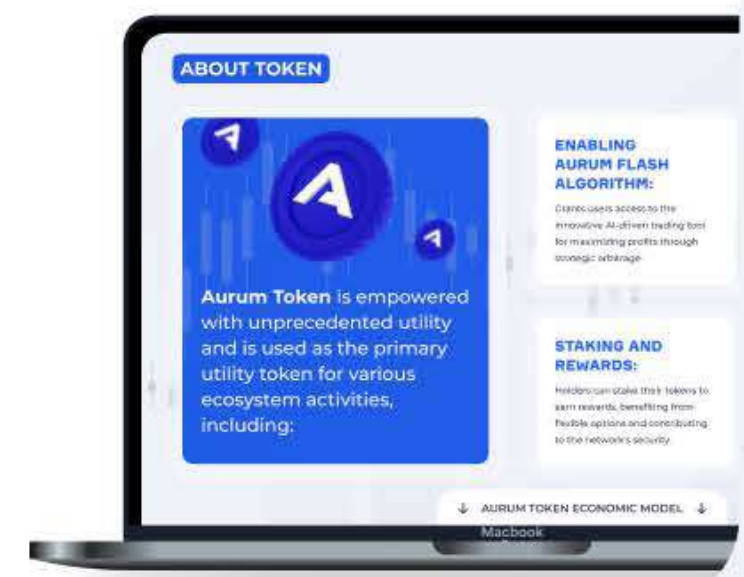

/04 Aurum Neo-Bank

A Web 3.0 wallet for secure and private management of both crypto and fiat assets, with seamless integration

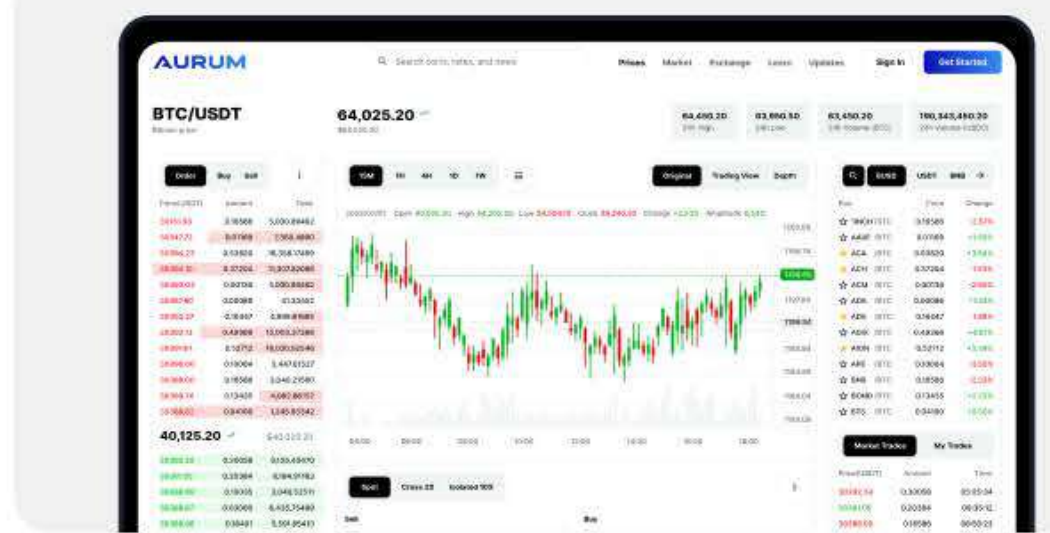

/05 Aurum Token

The ecosystem's core utility token, enabling access to financial tools, staking, and decentralized finance protocols with sustainable tokenomics.

/06 Aurum Network

A proprietary blockchain supporting secure, transparent, and efficient transactions within the DeFi ecosystem.

/07 Aurum Exchange

A decentralized exchange offering deep liquidity and cross-chain capabilities for efficient and flexible trading.

ACCESS TO AURUM ECOSYSTEM

ACCESS TO AURUM ECOSYSTEM AND MARKETING PLAN BENEFITS

To unlock the full range of products within the Aurum ecosystem and enjoy the benefits of our marketing plan, a subscription purchase is required.

Annual Subscription Fee:

\$19.99

This fee grants you:

Exclusive Access to Aurum's products and services.

Participation in our comprehensive marketing plan.

Entry into a thriving community of like-minded individuals.

Opportunities to attend official training sessions, events, and educational programs hosted by Aurum.

INTRODUCTION TO AUTOMATED TRADING

WHAT ARE AUTOMATED TRADING SYSTEMS?

An Automated Trading System (ATS) or trading algorithm is a program designed to fully or partially automate trading. It integrates multiple trading strategies to make more accurate decisions on opening positions.

Automated trading algorithms minimize the trader's time spent analyzing the market and price movements across various trading pairs by offering the following advantages:

ENHANCED RISK MANAGEMENT

ATS can analyze news and adjust strategies within microseconds before executing a trade if significant information is detected.

HIGH SPEED AND ACCURACY OF OPERATIONS

On average, it takes a person 10 seconds to place an order. In comparison, an algorithm can process and execute over 100 orders within that same time frame.

NO HUMAN FACTOR

Emotional stress can negatively impact decision-making during trading. Algorithms are guided by mathematical models, and their decisions are not influenced by emotions.

UNLIMITED EFFICIENCY

Unlike a human, an automated system can analyze the market and make trading decisions 24/7, ensuring that profitable opportunities are not missed.

AURUM AI-TRADER EX BOT

Trading Pair Selection: Choose from a variety of trading pairs, allowing for tailored trading strategies that align with market trends and personal preferences.

AURUM AI-TRADER EX BOT

The Aurum AI-Trader EX Bot is an advanced, fully autonomous trading system designed to maximize profitability in the cryptocurrency market. Leveraging AI to analyze real-time data, it operates 24/7 to make strategic, low-risk spot trades on your behalf.

Automated Performance: Once you activate the bot, it manages trades autonomously, aiming to maximize potential gains while minimizing risks.

Proven Returns: With over 1.5 years of consistent performance, the bot demonstrates an average monthly return of 18.5%.

Real-Time Trading Dashboard: Monitor your profits and track trading performance live with real-time analytics. The bot offers flexibility, with options to stop or withdraw profits at any time.

Advanced Risk Management: The bot applies strict risk protocols, adapting to market changes to ensure secure trading.

ABOUT TOKEN

Aurum Token is empowered with unprecedented utility and is used as the primary utility token for various ecosystem activities, including:

ENABLING AURUM FLASH ALGORITHM:

Grants users access to the innovative AI-driven trading tool for maximizing profits through strategic arbitrage.

ACCESS TO AURUM BLOCKCHAIN:

Used for all network operations, transaction fees, and Gas Fees, ensuring seamless interactions across the platform.

STAKING AND REWARDS:

Holders can stake their tokens to earn rewards, benefiting from flexible options and contributing to the network's security.

DEFLATIONARY MECHANISM:

A portion of tokens used in transactions and license purchases are burned, increasing scarcity and value.

AURUM TOKEN

ECONOMIC MODEL

Total Supply:
100,000,000

Blockchain:
Polygon

For every 1 million licenses purchased, the token supply expands by 2.5%.

Once all licenses are sold, Aurum will enter major exchanges, ensuring broader market access and liquidity.

10%

Marketing

Funds dedicated to supporting Aurum's referral and affiliate programs, incentivizing growth through community engagement.

10%

Development

Dedicated to improving the technology and ensuring continuous innovation

25%

Staking Incentives

Set aside to reward users participating in the staking system.

50%

License Purchases

Tokens reserved for acquiring licenses within the Aurum ecosystem.

5%

Team

Reserved for rewarding the Aurum team and founders for their contribution.

GROWTH MODEL

THE AURUM TOKEN IS DESIGNED WITH A UNIQUE GROWTH MECHANISM TIED TO THE SALE OF LICENSES WITHIN THE ECOSYSTEM.

For every \$1 million in license sales, the token's supply expands by 2.5%. This controlled expansion drives the gradual increase in the token's value, ensuring a scalable and sustainable financial model.

AURUM LICENSE TIERS:

UNLOCK THE POTENTIAL OF AURUM
FLASH

Aurum offers various License Tiers to meet different user needs and financial goals.

Each license grants access to advanced tools for engaging in arbitrage and leveraging the full power of Aurum Flash.

AURUM LICENSE PACKAGES

EACH PACKAGE IS DESIGNED TO CATER TO DIFFERENT USER NEEDS AND INVESTMENT LEVELS.

TOKEN BURN MECHANISM

Token Burn Mechanism: Driving Scarcity and Value

In the Aurum ecosystem, a Token Burn mechanism is implemented to ensure the continuous growth of the token's value. Here's how it works:

50% Burn on License Purchase:

- ✓ Every time a user purchases an Aurum License, 50% of the tokens used in the transaction are permanently burned. This means they are removed from circulation forever, reducing the total supply.

Increasing Scarcity:

- ✓ As more licenses are bought, the number of available tokens decreases, leading to increased scarcity. This reduction in supply ensures that the token becomes more valuable over time, benefiting all participants.

Transparent and Sustainable:

- ✓ The burning mechanism is fully transparent and ensures a sustainable economy within the Aurum ecosystem, where demand continually outpaces supply.

AURUM STAKING

IS A DECENTRALIZED PROCESS WHERE USERS LOCK UP THEIR AURUM TOKENS FOR A SPECIFIED PERIOD IN EXCHANGE FOR EARNING DAILY REWARDS.

By participating in staking, users contribute to the stability and security of the Aurum blockchain network while benefiting from passive income.

The rewards, or annual percentage yields (APY), vary based on the duration of the staking period, offering flexibility for both short-term and long-term investment strategies. Staking in the Aurum ecosystem is an accessible and secure way to grow your digital assets without the need for active trading.

KEY ADVANTAGES OF AURUM STAKING

HIGH APY RATES:

Aurum staking provides competitive annual percentage yields, with rewards ranging from 2.00% to 120.00%, depending on the staking duration, allowing users to earn substantial returns.

FLEXIBLE STAKING OPTIONS:

Participants can select staking periods from 1 month up to 12 months, tailoring their strategy based on their personal objectives and goals.

DAILY REWARD DISTRIBUTION:

Aurum offers daily payouts on staking rewards, providing a consistent source of passive income for token holders, making it easy to track and grow assets

NETWORK SECURITY CONTRIBUTION:

By staking tokens, users contribute to the security and stability of the Aurum network, helping to reinforce the blockchain while benefiting from their participation.
